SUMMARY

Final-year BCA student who designs and ships full systems end-to-end, including a live mobile development workspace with an integrated AI agent and a deployed retrieval-augmented chat assistant. Comfortable across mobile, backend, and workflowautomation tooling, with solid fundamentals in data structures, databases, and object-oriented programming. Seeking a software developer/engineer role to build on this foundation.

EDUCATION

Bachelor of Computer Applications (BCA) - CSI College of Commerce, Dharwad | CGPA: 7.2 (As of 4th semester) | Expected 2027
Pre-University Course (PUC) - Science, H M Ishwaran SC PU College, Dharwad — 78.5% (2024) SSLC
- K.E. Boards High School, Dharwad — 84.8% (2022)

TECHNICAL SKILLS

Languages: Python, Java, C, JavaScript, HTML, CSS

Frameworks & Platforms: Flutter, LangGraph, n8n, Cloudflare Workers

Databases: Oracle Database, SQLite

Core CS Fundamentals: Data Structures & Algorithms (C), DBMS, Object-Oriented Programming, Computer Networking (basics)

EXECUTED PROJECTS FROM 2025 – 2026 AS BELOW

1. Pro Coding Studio — Mobile Development Workspace with AI Agent

Flutter, Cloudflare Workers, Gemini, Groq, SQLite • Live, in active use Case Study | Download (Play Store)

- Architected a mobile workspace for project management, code editing, live preview, and GitHub sync, with an AI agent that can act directly on project files.
- Designed the AI backend on Cloudflare Workers with automatic fallback between Gemini and Groq to keep the agent responsive under provider outages or rate limits.
- Implemented GitHub synchronization using the low-level Git Data API (blobs, trees, commits) for precise control over what gets pushed.

2. Radha — Embeddable AI Documentation Assistant

Vanilla JavaScript, n8n, Gemini (RAG) • Live, deployed on a real documentation site

Live: Pro-Coding-Studio-Documentation | Case Study

- Built a single-script, framework-free chat widget that answers visitor questions using retrieval-augmented generation grounded in the host site's own content.
- Designed the entire backend as an orchestrated n8n workflow (webhook intake, vector search, Gemini generation) instead of a hand-written server, with n8n auto-scaling multiple workflow instances per concurrent query.
- Currently live in production; throughput is bound only by LLM API cost and host server capacity, not by the application architecture itself.

3. Surya — Autonomous Mobile UI Agent

Kotlin, Python, LangGraph, Gemini • Personal research prototype

Case Study | Download (APK)

- Designed a thin-client agent architecture: an Android app observes the device's accessibility tree while a Python server handles all reasoning.
- Built a plan → execute → verify agent loop using LangGraph and Gemini to complete natural-language tasks without predefined automation scripts.

CURRENT WORKING PROJECTS:

1. **Clinic Management Website & App**
   Next.js, Expo (React Native), TypeScript, Supabase, Cloudflare • Client project, in development
   - Next.js, Expo (React Native), TypeScript, Supabase, Cloudflare • Client project, in development
   - Designing a booking workflow where patients submit requests on the website, and staff confirm, reschedule, or add phone and walk-in bookings in the app.
   - Implementing secure staff login and row-level security so booking data is accessible only to authorized users.
   - Planning for India's DPDP Act: minimal data collection and a consent checkbox on the booking form.

Note: Projects were built with AI-assisted development; architecture, integration, and deployment decisions are my own.

Declaration:

I hereby declare that the above furnished details are true to the best of my knowledge.

Place: Dharwad

Yours Sincerely,
(Prajwalsingh)
